

*The ultimate list of
laboratory manuals you can
use for **free***

In this bonus document you'll find six additional pocket lab apps that we think are very useful.

If you didn't find an app of your choice on our blog post, we hope you'll like one on this list.

RESULTS

Intended as a simple, educational application for doctors and laboratory staff, we can say that it provides exactly what it promises. It has an interesting feature where you can see the color of the tube next to the name of each test.

That shows us this app was primarily made for doctors and lab staff.

Another useful feature in that app is the search button, which works perfectly fine. The app has most of the tests you could ever need, but we disliked the way it was presented to the user. It all seems very confusing and complicated.

NORMAL LAB VALUES REFERENCE (SIMPLE)

This is a classic pocket lab app for doctors. It's not flashy or anything, but some users like that.

Yet, the app is maybe too simple as it lacks some basic tests.

Unfortunately, it contains very aggressive ads, much more than on other similar apps.

But in general, the app is useful for the most basic test checks, and we hope it will be soon updated with some additional features.

NORMAL LAB VALUES

Is almost a twin app of the previous app in this list, as it has a similar concept and both were developed by the same author.

But still, we like this version much more, because now the app icon is green! - we're joking of course.

This version has a quick search which is always useful in a pocket app, but similarly to the previous app it does lack some basic tests, and the user interface is kind of confusing.

The tests aren't grouped into panels, so you have to browse manually for every test, which feels tedious.

This is the most interesting app in the list. It doesn't have the tests you'll need, but you have the possibility to add your own tests.

Design of the app is innovative and features tabs for viewing tests, adding new ones, and erasing old ones. Using the "ADD" tab you can add a new test, and move it to your own "virtual lab" inside the application. You can also add reference value, test interpretation etc.

We would recommend this app to those users who want to customize their pocket lab app. As a drawback we'd like to mention that it lacks some basic tests, so it's not really an app you can use as soon as you install it on your device.

NORMAL LAB VALUES++

Unlike any of the others. That's how we would describe this app. Similar to other apps it does have a quick search feature, but in essence, this app is a hybrid. We say that because it's clearly divided into a section with laboratory tests and a section with results interpretation.

If you're using the part of the app containing lab tests and their normal values -- you won't notice anything different. But if you open the "abbreviations" section of the app, you'll find a small encyclopedia with an almost endless number of medical terms ordered alphabetically.

You'll be maybe disappointed to find out that this data isn't embedded in the app, it's just links to the google search page. But we do understand that this was a better solution for the app developers, because putting all this data into a pocket app would make it a large app to download and it would probably be slow in response.

This isn't an app for everyone, it's maybe only for those curious ones who want to know more.

It would be a challenge to make an app that's more simple than this one. Design is very simple, contains basic tests, and that's pretty much it.

Power users should skip this app, as it doesn't even have a quick test search option. We'd recommend this app to those who want to have all info on one screen and a simple navigation.

We're convinced that some of you will like this concept for a pocket lab app.

QUICK LAB REF

Quick Lab Ref (Quick Clinical Laboratory Values Reference) is the most detailed and in our opinion the best pocket lab app.

CITO! LAB VALUES MEDICAL

Simple, nicely designed app. You'll get the most out of this app if you use it as an addition to Quick Lab Ref application, for those times when you urgently need some info about a certain test.
